

1. What exactly is []?

**Ans: The bracket used for definitions the list.**

2. In a list of values stored in a variable called spam, how would you assign the value 'hello' as the third value? (Assume [2, 4, 6, 8, 10] are in spam.)

Let's pretend the spam includes the list ['a', 'b', 'c', 'd'] for the next three queries.

**Ans: spam.insert('hello', 2)**

3. What is the value of spam[int(int('3' \* 2) / 11)]?

**Ans: give an type error**

4. What is the value of spam[-1]?

**Ans: 10**

5. What is the value of spam[:2]?

**Ans:2,3,6**

Let's pretend bacon has the list [3.14, 'cat,' 11, 'cat,' True] for the next three questions.

6. What is the value of bacon.index('cat')?

**Ans:1**

7. How does bacon.append(99) change the look of the list value in bacon?

**Ans:**

[3.14, 'cat,' 11, 'cat,' True,99]

8. How does bacon.remove('cat') change the look of the list in bacon?

**Ans:[3.14, 11, 'cat,' True,99]**

9. What are the list concatenation and list replication operators?

**Ans:The operator for list concatenation is +, while the operator for replication is**

10. What is difference between the list methods append() and insert()?

**Ans: append can add the entry at th alst by default but in insert we can provide the index where we want to add the entry value.**

11. What are the two methods for removing items from a list?

**Ans: del(), pop() and remove**

12. Describe how list values and string values are identical.

**Ans: Both lists and strings can be passed to len(), have indexes and slices, be used in for loops, be concatenated or replicated, and be used with the in and not in operators.**

13. What's the difference between tuples and lists?

**Ans: tuple can not be edited (mutable) but the list can be.**

14. How do you type a tuple value that only contains the integer 42?

**Ans:**

**Tt = (42)**

15. How do you get a list value's tuple form? How do you get a tuple value's list form?

**Ans:**

**By using tuple() and list()**

16. Variables that "contain" list values are not necessarily lists themselves. Instead, what do they contain?

**Ans:**

**They contain references to list values**

17. How do you distinguish between copy.copy() and copy.deepcopy()?

**Ans: The copy.copy() function will do a shallow copy of a list, while the copy.deepcopy() function will do a deep copy of a list that is only copy of the list**
